

## Lake Assessment - May 2023

### Lake 1: Small Lake

At the time of my visit the lake was milky slightly brown black. OK.

Geese and geese manure were present but not excessive.

Nutrient levels were low (good). Unwanted aquatic plant growth is not a problem now.

### Lake 2: Large Middle Lake

At the time of my visit the lake was milky slightly brownish OK.

Nutrient levels were low good.

### Lake 3:

At the time of my visit Lake Superior was milky slightly black looking.

Nutrient levels were low for this lake also which is very good going into the summer season.
