

## Lake Assessment – January 2024

### Lake 1: Small Lake

At the time of my visit the lake was milky - OK. Excessive geese manure and lots of geese are a problem this time of year. Nutrient levels were high for phosphorous, possibly caused by the large number of geese, and low for nitrogen.

### Lake 2: Large Middle Lake

At the time of my visit the lake was slightly milky clear looking. Nutrient levels were slightly elevated, again likely due to the large number of geese frequenting the lake.

### Lake 3:

Lake 3 was milky OK. Nutrient levels OK.
