

## Lake Assessment – February 2024

### Lake 1: Small Lake

At the time of my visit in February the lake was milky brown. OK. Geese and geese manure were excessive. Nutrient levels were low (good) for nitrogen very high for phosphorous.

### Lake 2: Large Middle Lake

At the time of my visit the lake was milky greenish looking. OK. Excessive geese and geese manure. Nitrogen low ok. Phosphorous elevated.

### Lake 3:

At the time of my visit Lake Superior was milky brown slightly blackish; OK. Nutrient levels were low for nitrogen. Phosphorous levels excessive for February. Excessive geese and geese manure.

Migrating geese continue to frequent the lake.
