

Lake Assessment – May 2024

Lake 1: Small Lake

At the time of my visit the lake was milky black looking - OK. Nutrient Phosphorous levels elevated. Nitrogen low good. The lake outlet was partially blocked with leaves again this month. No unwanted aquatic plants developing.

Lake 2: Large Middle Lake

At the time of my visit in May the lake was milky slightly greenish brown looking. OK. Nutrient levels low very good. Turtles are beginning to be more active as the water warms. No unwanted aquatic plants developing.

Lake 3:

At the time of my visit Lake Superior was milky brown looking – OK. Nutrient levels were low which will help reduce unwanted plant and algae growth. The attractive planted aquatic plants Pickeral Weed and Iris are developing nicely.
